

The easy way of getting started

Getting started with eflow is easy. Only a minimum of setting up is required, and with a little help from your eflow partner your system will soon be up and running.

eflow requires no installation and may be operated from any computer – and in case you should need any assistance we will be ready to help you within normal working hours.

Call your eflow partner in case you want any further information on eflow.

VERSION 1
2016

Efficient booking and planning for body shops

eflow | BOOKING & WORKFLOW

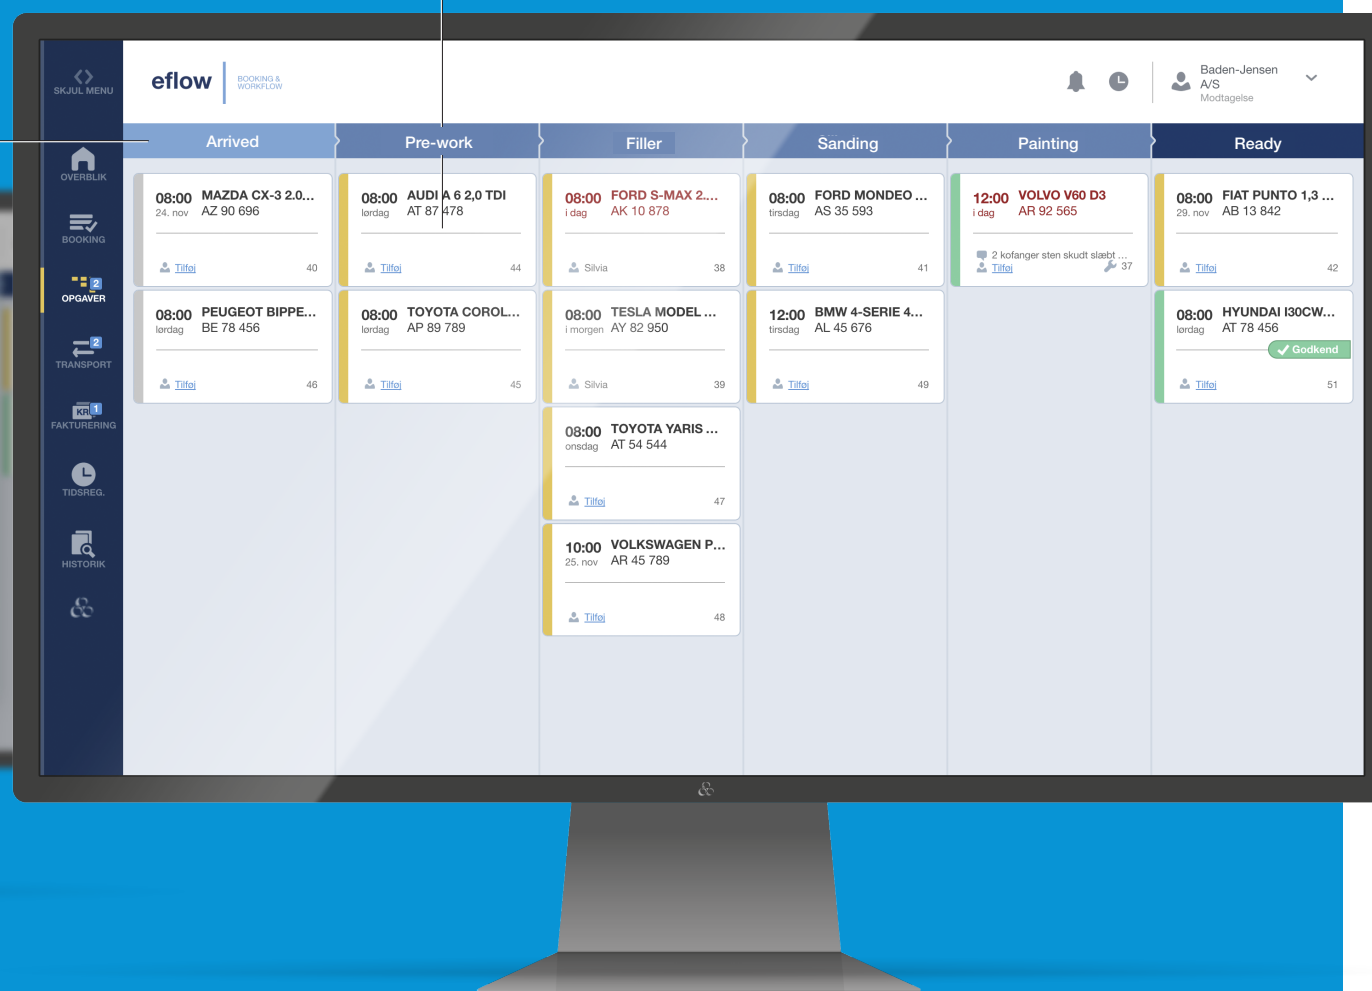

Easily adaptable to your workshop

The workflow may be adapted to perfectly suit your working procedure. In this way you will always know exactly where in the process a job will be.

Simple and easy to use

eflow is simple and logic. The system is easily accessible for your employees, for example a task card may be moved simply by dragging and dropping it.

Always updated and secure

eflow runs online. Thus you will always have access to the latest version. Furthermore, your bookings, documentation, etc. are kept safe due to constant back-up.

Look forward to an efficient daily life

eflow is a brand new way of cooperating with your customers and employees. The system gives you an overview of your business – e.g. incoming bookings, cars to pick up, and running tasks. All with the purpose of consolidating your business.

Online booking saves time

eflow enables your customers to make online reservations in your system. The customers simply fill in all information of the task to be done, and all that is left for you is to accept their inquiry. Your customers will be able to follow the progress of the specific task until the vehicle is returned to their premises.

Easy way of clocking in/out

As an integrated part of eflow your employees may clock in or out from any computer in the workshop.

Keep track of the working hours of your employees

eflow helps you keep track of the working hours, sickness days, and holidays of your employees. You will get an overview of the time registrations as well as a possibility of an easy transfer of these data to your administration.

Better control with transportation

eflow's transportation function will vastly improve your control with the pick-up or return of cars. If the driver brings along a tablet on his trip he may even make a current registration of the cars he has picked up or returned.

Planning the pick-up of cars

It will be easier for the driver to plan his routes and make sure to pick up all the cars waiting. As soon as a car arrives at the workshop your employees will be able to find it in eflow and start working on it.

Efficient integration with your work provider

Your customers will be able to send the reports from their work provider directly to eflow. The reports will automatically become accessible on your task card so that all the information on the particular task will be available in one place.

Dashboard with daily overview

Booking – online as well as in-house

Task control in the entire workshop

Transportation – pick up as well as delivery

Integration with your work provider – for customer bookings

Keeping track of working hours of all employees
